~9%

CONVERSION RATE

▲ from ~2% at launch

PPC Guru launched a fresh Google Ads account for a Toronto physiotherapy and massage health centre in early 2026 and, in the first full quarter under management (April–June 2026), grew it to about nine genuine phone-call leads a month at roughly \$59 each — up from a single tracked call in the launch month, with a conversion rate near 9%.

About the Client

Palmdale Health Center is a physiotherapy and registered massage therapy (RMT) practice serving patients across Toronto, including the Scarborough and North York areas. The clinic offers hands-on physiotherapy, massage therapy and related wellness treatments, and books patients through the JaneApp scheduling system. Like most local clinics, its growth depends on a steady flow of new-patient enquiries — phone calls and online bookings from people searching for treatment nearby — which makes reliable call tracking central to measuring what the advertising actually produces.

How the Account Came to PPC Guru

The clinic wanted a measurable, well-tracked Google Ads presence built around genuine patient enquiries rather than vanity clicks. PPC Guru launched a fresh Search account in early 2026 with call tracking and lead measurement in place from day one, then grew spend month by month as the phone-call data proved the channel was working.

The Challenge

Launching a new local health-centre account means starting from zero data. Early on, spend has to work hard for its first genuine enquiries, and the account's real conversion signals — phone calls to the clinic — need to be separated from Google Business Profile local actions and booking-page button clicks that can otherwise make raw conversion counts look larger than the true number of patient enquiries.

What We Analyzed & Planned

Because this was a launch rather than a turnaround, PPC Guru put measurement first: wire up call tracking and lead signals before scaling, focus the budget on high-intent local searches, and let genuine phone-call volume — not raw click counts — guide how quickly to grow.

- Stand up call tracking (website calls and calls from ads) plus lead-form and JaneApp booking signals from launch.
- Separate genuine phone-call leads from Google Business Profile local actions and booking-button clicks so reporting reflects real enquiries.
- Concentrate budget on high-intent local searches such as 'physiotherapy near me' and 'massage therapy near me'.
- Grow spend gradually, only as monthly phone-lead volume confirmed the channel was converting.

What PPC Guru Did & Why

Two focused Search campaigns	A physiotherapy Search campaign and a dedicated RMT (massage) campaign kept budget on the two core service lines and their high-intent local searches.
Call tracking from launch	Website call and call-from-ads tracking captured phone enquiries — the clinic's primary lead type — from the very first month.
Genuine-lead reporting	Phone-call leads were reported separately from local actions and JaneApp booking-button clicks so the clinic saw real enquiry counts.
Gradual budget scaling	Monthly spend was increased only as phone-lead volume grew, keeping cost per lead falling as the account matured.
Search-term hygiene	Ongoing negative-keyword work kept traffic on treatment-intent searches in Scarborough and North York.

UNDER THE HOOD

Campaign type	Search (x2)
Bidding strategy	Manual CPC + Maximize Conversions
Approx monthly budget	≈ \$555 CAD (Q2 avg)
Service lines	Physiotherapy · Registered Massage Therapy
Lead signal	Phone calls (website + ads)
Booking system	JaneApp

The Launch Timeline

- Feb 2026** PPC Guru launched the account with call tracking in place — one tracked phone lead in the first month as the campaigns ramped.
- Mar 2026** Two genuine phone leads as targeting and negative keywords settled.
- Apr–May 2026** Phone leads climbed to 5 then 11 a month as budget was extended on proven searches.
- Q2 2026 (Apr–Jun)** About 9 genuine phone leads a month — peaking at 12 in June — at roughly \$59 per lead and a conversion rate near 9%.

The First 90 Days

The launch quarter showed a clear, compounding ramp. The first month produced a single tracked phone lead while the campaigns gathered data; by the third month cost per lead had already fallen from about \$293 to roughly \$98 as genuine call volume grew.

Period	Spend	Phone Leads	Cost / Lead
First 30 days (Feb 2026)	\$293	1	\$293.39
Days 31–60 (Mar 2026)	\$462	2	\$231.10
Days 61–90 (Apr 2026)	\$488	5	\$97.57

Gradual Improvement, Month by Month

From there, genuine phone leads compounded month over month rather than spiking once and fading: 1 in February, 2 in March, 5 in April, 11 in May and 12 in June, before a quieter July (7) as part of the natural month-to-month

variation of a real account. Cost per lead fell in step, from roughly \$293 in the launch month to about \$59 across the most recent complete quarter. The trend below shows a steady early climb rather than a one-off spike.

Results

Metric	Launch (Feb 2026)	Now (Q2 2026, avg/mo)	Change
Genuine phone leads / month	1	≈ 9	▲ Strong growth
Cost per lead	≈ \$293	≈ \$59	▼ Much lower
Conversion rate	≈ 2%	≈ 9%	▲ Higher
Monthly ad spend	≈ \$293	≈ \$555	Scaled with results

Figures use genuine phone-call leads only. Raw account 'Conversions' read higher from June 2026 because a booking-page button-click action (*janeapp_click*) and Google Business Profile local actions are also recorded — those are excluded here so the numbers reflect real patient calls.

Lead quality: Every tracked lead in this study is a phone call to the clinic — the highest-intent enquiry type for a local health centre — captured from both website and ad call extensions.

Quarterly Genuine Leads Since Launch

Genuine phone leads per quarter · Google Ads

Why It Worked

- ✓ Call tracking was in place from launch, so budget decisions followed genuine phone enquiries.
- ✓ Two focused Search campaigns kept spend on core physiotherapy and massage searches.
- ✓ Genuine-lead reporting kept vanity actions out of the numbers used to scale.
- ✓ Budget grew only as the phone-lead data proved the channel was converting.

Lessons for Clinic Owners

- 1 Track phone calls from the first day — for a local clinic, calls are the highest-intent enquiry.
- 2 Separate genuine calls from Google Business Profile local actions and booking-button clicks so your reported numbers stay honest.
- 3 Give a new account a few months to gather data before judging cost per lead.
- 4 Scale budget gradually, following genuine lead volume rather than raw click counts.
- 5 Keep negative keywords current so local searches reach the right neighbourhoods.

Where They Stand Today

In just its first full quarter under management, Palmdale Health Center went from a single tracked phone lead in the launch month to about nine genuine phone-call leads a month across April–June 2026, peaking at 12 in June, at roughly \$59 per lead and a conversion rate near 9%. The account now has clean call tracking, a focused two-campaign structure and a clear, data-backed basis to keep scaling as demand grows.

BOOK

All figures are pulled directly from the clinic's Google Ads account and shown on a monthly basis. 'Leads' are genuine phone-call conversions only — Google Business Profile local actions and JaneApp booking-button clicks are excluded so counts reflect real enquiries. 'Now' is the most recent complete quarter (April–June 2026); the launch month (February 2026) is the baseline.

Advertising results vary based on industry, market conditions, competition, budget, campaign history, offer, website experience, conversion tracking, and other factors. The results reflect the specific account and reporting periods shown and do not guarantee future performance.
