CHANNELS, ONE BRAND

Google + Meta

PPC Guru runs EcoCare Home Comfort's HVAC advertising across both Google and Meta. Google Search captures homeowners actively looking for service — mostly phone calls — while Meta builds a high-volume lead pipeline. Together the two channels give the company both immediate high-intent enquiries and scalable demand, each tracked to genuine leads.

About the Client

EcoCare Home Comfort is a Canadian HVAC and home-comfort company. Its customers fall into two groups: homeowners with an urgent need (a failing furnace or AC) who search Google and want to call now, and a much larger group who can be reached earlier on Facebook and Instagram with a maintenance or install offer. PPC Guru runs both channels so EcoCare covers the whole funnel.

How the Account Came to PPC Guru

EcoCare launched on Meta with PPC Guru in August 2025 and added a managed Google Ads account in late 2025. Rather than treat them separately, PPC Guru runs them as one HVAC growth programme: Google for bottom-of-funnel intent, Meta for volume and demand generation — each measured on genuine leads, not clicks.

The Challenge

What We Analyzed & Planned

The plan was to match each channel to what it does best. On Google, track calls as the primary conversion and target urgent service searches. On Meta, run instant lead forms with a clear offer and scale reach as cost per lead held up. Keep both measured on genuine enquiries so budget can move to whichever channel is delivering.

- Google: track phone calls as the primary conversion; target urgent HVAC service searches.
- Meta: run instant lead forms with a clear seasonal offer; scale reach on proven cost per lead.
- Measure both channels on genuine leads (calls / forms), excluding vanity actions.
- Shift budget toward whichever channel delivers the best cost per genuine lead.

What PPC Guru Did & Why

Two-channel structure	Google for high-intent service calls; Meta for high-volume demand generation.
Call tracking on Google	HVAC intent is phone-led, so calls are the primary conversion.
Instant lead forms on Meta	Low-friction enquiries that scale reach affordably.
Budget follows the leads	Spend shifts to the channel delivering the best genuine cost per lead.

UNDER THE HOOD

Channels	Google Search + Meta
Google	Search · Max Conversions · call-led
Meta	Instant Forms (lead objective)
Lead signals	Calls (Google) · Lead forms (Meta)
Measurement	Genuine leads per channel

Channel Roles at a Glance

Each channel plays a distinct role in the HVAC funnel.

Channel	Result / month	Role	Since
Meta (Facebook & Instagram)	≈ 396 lead-forms	High-volume demand	Aug 2025
Google (Search)	≈ 14 call leads	High-intent, phone-led	Nov 2025

Results

Metric	Earlier	Now (Q2 2026)	Change
Meta — lead-form enquiries / month	32 (Aug '25 launch)	≈ 396	▲ Strong growth
Google — call leads / month	≈ 10 (Q1 '26)	≈ 14	▲ +35% quarter over quarter
Meta cost per lead	≈ \$19	≈ \$26	Scaled with results

Meta drives volume (spend scaled from about \$600 to over \$10,000 a month as the lead pipeline grew), while Google contributes fewer but higher-intent phone leads — roughly 7 in 10 of EcoCare's Google leads are direct calls.

Why It Worked

- ✓ Each channel matched to what it does best in the HVAC funnel.
- ✓ Call tracking on Google so budget targets urgent, phone-led demand.
- ✓ Scalable Meta lead forms building a high-volume pipeline.
- ✓ Budget that follows genuine cost per lead across channels.

Why HVAC Needs Both Channels

A homeowner whose furnace just failed searches Google and calls immediately — that's high-intent, and Google captures it. But most homeowners aren't in crisis today; they can be reached earlier on Facebook and Instagram with a tune-up or install offer, building a pipeline for the weeks ahead. Running both, measured on genuine leads, means EcoCare captures urgent demand and creates new demand — and PPC Guru can move budget to whichever channel is converting best at any point in the season.

Lessons for HVAC Business Owners

- 1 Treat Google and Meta as one programme — intent capture plus demand generation.
- 2 On Google, track phone calls as the primary conversion; HVAC is phone-led.
- 3 On Meta, use instant lead forms with a clear seasonal offer to build volume.
- 4 Measure both channels on genuine leads so you can move budget to the best performer.
- 5 Expect a higher cost per lead on Google calls — they are worth more per job.

Where They Stand Today

EcoCare Home Comfort now runs a full-funnel HVAC programme: about 14 high-intent phone leads a month from Google Search and roughly 396 lead-form enquiries a month from Meta in the most recent quarter, each measured on genuine enquiries. The company captures urgent service demand and generates new demand at the same time — with PPC Guru able to shift budget to whichever channel delivers the best cost per lead as the season changes.

Want results like these?

Run an HVAC or home-services business? PPC Guru builds full-funnel Google and Meta programmes measured on genuine leads, with transparent reporting.

Figures are pulled directly from EcoCare's Google Ads and Meta accounts. Google leads are genuine calls and forms (local actions excluded); Meta leads are instant-form enquiries. 'Now' is the most recent complete quarter (Apr–Jun 2026). The two channels are reported separately because their lead types and intent differ.

Advertising results vary based on industry, market conditions, competition, budget, campaign history, offer, website experience, conversion tracking, and other factors. The results reflect the specific account and reporting periods shown and do not guarantee future performance.
