LEADS BY PHONE CALL

Highest-intent enquiries

PPC Guru launched EcoCare Home Comfort on Google Ads with call and form tracking wired in from day one, then grew it from about 10 genuine leads a month in its first full quarter to roughly 14 a month in the most recent quarter (Apr–Jun 2026) — a 35% quarter-over-quarter increase, with about seven in ten leads arriving as direct phone calls.

About the Client

EcoCare Home Comfort is a home-comfort and HVAC company serving homeowners across Ontario, Canada. The business installs and services heating, cooling and air-conditioning systems, and its growth depends on a steady flow of homeowner enquiries — phone calls and quote requests from people who need a repair, a replacement or a new system installed. Google Ads is the company's channel for reaching those high-intent searchers at the exact moment they are looking for help, which makes reliable call and form tracking central to the account.

How the Account Came to PPC Guru

EcoCare Home Comfort brought its home-comfort advertising to PPC Guru in late 2025 for a fresh, measurement-first Google Ads build. Rather than chase clicks, the goal was a lead engine the business could trust — one where every phone call and quote request is tracked, so budget could be scaled on proven demand rather than guesswork.

The Challenge

As a fresh Google Ads build, the account had to prove the channel from a standing start — establishing trustworthy tracking, learning which homeowner searches turn into booked work, and building enough conversion volume for automated bidding to optimize against. HVAC demand is also seasonal and phone-heavy, so measuring calls accurately was essential before any budget could be scaled with confidence.

What We Analyzed & Planned

Before spending began, PPC Guru set up the measurement first: call tracking on ads and the website, a lead-form conversion, and an offline import path for booked jobs. A Performance Max campaign was then launched to reach homeowners across Search, Maps and Google's wider inventory, with automated bidding pointed at genuine leads rather than surface-level clicks.

- Build call tracking for both ad calls and website calls to the toll-free line.
- Add a lead-form conversion for online quote requests.
- Configure an offline import path so booked and completed jobs can be fed back to Google.
- Launch a Performance Max campaign with Maximize Conversions bidding aimed at genuine phone and form leads.

What PPC Guru Did & Why

Performance Max campaign	Reached homeowners across Search, Maps and Google's wider inventory from a single, conversion-focused campaign.
Call tracking (ads + website)	Captured both ad-call and website-call leads to the toll-free line — the primary way homeowners get in touch.
Lead-form conversion	Tracked online quote requests so form enquiries counted alongside calls.
Offline import path	Set up so booked and completed jobs can be fed back to Google, pointing bidding toward real work rather than surface actions.
Maximize Conversions bidding	Let automated bidding chase genuine phone and form leads once enough conversion data existed.
Scaled budget into season	As genuine leads proved out, monthly budget was increased ahead of the peak cooling months.

UNDER THE HOOD

Campaign type	Performance Max
Bidding strategy	Maximize Conversions
Monthly budget (Q2 2026)	≈ \$1,260 CAD
Lead signals	Ad calls · Website calls · Lead forms
Offline import	Configured for booked jobs
Market	Ontario, Canada

The Launch Timeline

- Nov 2025** PPC Guru launch — account built with call and form tracking, first budget live as the campaign ramped.
- Dec 2025** First full month delivered about 19 genuine leads, almost all direct phone calls.
- Q1 2026 (Jan–Mar)** Account settled into its first complete quarter at about 10 genuine leads a month while targeting was refined.
- Q2 2026 (Apr–Jun)** About 14 genuine leads a month — a 35% increase over the prior quarter — as budget was scaled into peak cooling season.

Gradual Improvement, Month by Month

The account did not spike once and fade. After a strong first full month (about 19 leads in December 2025, almost all phone calls), it settled through Q1 2026 into roughly 10 genuine leads a month while targeting and negative keywords were refined. As homeowner demand picked up into spring and budget was scaled, Q2 2026 climbed to about 14 genuine leads a month. The monthly trend below shows the natural month-to-month variation of a real, seasonal HVAC account rather than a manufactured straight line.

Monthly Genuine Leads

Dec 2025 – Jun 2026 · calls & form submissions

Results

Metric	First quarter (Q1 2026, avg/mo)	Now (Q2 2026, avg/mo)	Change
Genuine leads / month (calls + forms)	≈ 10	≈ 14	▲ +35% quarter over quarter
Leads per quarter	31	42	▲ Strong growth
Share of leads by phone call	—	≈ 71%	▲ Phone-led
Monthly ad spend	≈ \$667	≈ \$1,260	Scaled with results

Cost per lead sat near \$90 in Q2 2026 as budget was scaled about 1.9x into peak cooling season, while genuine leads grew about 35% quarter over quarter. For HVAC — where a single install can be worth thousands — the account is being grown on measurable phone and form demand rather than clicks.

Lead quality: About seven in ten genuine leads in the most recent quarter are direct phone calls — the highest-intent enquiry type for an HVAC business — tracked from ad click and website through to the call.

Quarterly Genuine Leads Since PPC Guru Launch

Genuine leads (calls + forms) per quarter · Google Ads · Q4'25 = launch (December only)

Why It Worked

- ✓ Call and form tracking was built in from launch, so every genuine enquiry was measured.
- ✓ Performance Max reached homeowners across Search, Maps and beyond from one focused campaign.
- ✓ Budget was scaled only after leads proved out, into the peak cooling season.
- ✓ The account leaned into phone calls — the highest-intent enquiry type for HVAC.

Why Call Tracking Comes First in HVAC

Homeowners with a broken furnace or air conditioner call — they rarely fill in a form and wait. That is why the account was built around call tracking from day one, capturing both clicks-to-call on ads and calls placed from the website's toll-free line. About seven in ten genuine leads in the most recent quarter arrived by phone. Tracking those calls as conversions — rather than counting button clicks or map views — is what lets automated bidding find more of the searches that turn into booked service calls, and gives the business an honest line of sight from ad spend to real enquiries.

Lessons for Home-Services Owners

- 1 Track phone calls as conversions — in home services, the phone is the primary lead, not the form.
- 2 Set up tracking before you scale spend, so growth is based on real enquiries.
- 3 Give a new account a full quarter to gather data before judging automated bidding.
- 4 Plan budget around season — HVAC demand swings, so scale into the peaks.
- 5 Feed booked and completed jobs back to Google so bidding optimizes toward real work.

Where They Stand Today

In just two full quarters under management, EcoCare Home Comfort has a working, measurable Google Ads lead engine. The most recent complete quarter (April–June 2026) generated about 14 genuine phone and form leads a month — a 35% increase over the prior quarter — with roughly seven in ten arriving as direct phone calls. Because calls and forms are tracked from the click, the business can see which spend produces real enquiries and has a clear, data-backed basis to keep scaling through the seasons.
